> TECHNICAL EXPERTISE

Engine & Systems

Unreal Engine 5 (Actor Components, Blueprints, Game Systems, Lighting, Network Replication, UMG)

Animation & Rigging

Akeytsu, Blender, State Machines, Blend Spaces, Procedural Buoyancy & Locomotion, Montages

Shaders & VFX

Vertex Shader Parameters, Niagara Particle Systems, Draw-Call Culling

Scripting & Modding

Bethesda Creation Kit, Papyrus Scripting, Custom AI Behavior Trees, Quest Architecture, Teleportation Grids

Media & Documentation

Technical Video Capture & Editing, Product Trailers, Implementation Setup Documentation, Storefront Assets

Hardware & Fabrication

Single-Board Computers, CAD Modeling, 3D Printing Prototyping, Vacuum Forming

> COMMERCIAL ENGINE SYSTEMS & FAB MARKETPLACE TOOLS

Advanced Swim Component | View Product on Epic Games Fab Marketplace

- ▶ Engineered a plug-and-play Actor Component for procedural swimming, volume surface detection, and buoyancy physics.
- ▶ Implemented dynamic animation state machine blending across treading water, diving, sprinting, and vertical surfacing.
- ▶ Packaged comprehensive visual Blueprint documentation and demo levels to ensure zero-friction setup for clients.

Easy Taming Component | View Product on Epic Games Fab Marketplace

- ▶ Architected an extensible creature AI framework featuring configurable behavior states (wild, passive, aggressive, follow, mount).
- ▶ Constructed server-authoritative multiplayer network replication workflows for feeding prompts, taming bars, and state sync.
- ▶ Standardized integration pathways for open-world survival gameplay loops without tight coupling to base character meshes.

Catalyst Dynamic Flame | View Product on Epic Games Fab Marketplace

- ▶ Programmed a real-time flammability and fire propagation component optimized for low draw-call overhead in foliage-heavy maps.
- ▶ Built progressive procedural charring materials with vertex shader burning parameters and proximity-based heat traces.

Mobile Touch Controls | View Product on Epic Games Fab Marketplace

- ▶ Built on Unreal Engine's Enhanced Input framework to provide adaptive on-screen touch interfaces for cross-platform games.
- ▶ Implemented dynamic floating thumbsticks, configurable action buttons, and touch gesture recognition with zero input lag.

> FEATURED GAME SYSTEMS & PRODUCTION WORK

The Elder Scrolls V: Skyrim — Alidon's Ultimate Armory & Expansions

15,000,000+ Cross-Platform Downloads

Verified Bethesda Creation Club Creator | PC, Xbox, PlayStation

- ▶ Created one of the most widely downloaded gameplay modification suites in Bethesda modding history.
- ▶ Authored complex Papyrus scripts driving custom teleportation networks, dynamic activators, custom vendors, and spell frameworks.
- ▶ Designed bespoke subterranean environments, weapon armories, and testing facilities supporting hundreds of concurrent gameplay hours.
- ▶ Produced all promotional showcase videos, tutorials, update change logs, and established an active Discord support community.

Toss-o-bot | Epic Games Mega Stack-O-Jam

72-Hour Solo Game Jam

Solo Developer (Design, Animation, Programming, Build Shipping)

- ▶ Conceived, designed, animated, and packaged a complete game using Epic Games' Stack-O-Bot digital assets in 3 days using Unreal Engine and Akeytsu.
- ▶ Authored custom locomotion graphs, state-driven enemy AI, multi-phase boss mechanics, and implemented a gameplay loop for itch.io release.

> PROTOTYPES & HARDWARE ENGINEERING

Dual-Wield Magic & Cross-Platform Inventory Prototypes | Unreal Engine

- ▶ Engineered a modular, independent per-hand spellcasting framework combat system.
- ▶ Constructed a data-driven item architecture using UMG widgets for dynamic grid slots, equipment binding, and consumption logic.

Ruggedized Portable Cyberdeck Terminal | Embedded Systems & Rapid Fabrication

- ▶ Designed and fabricated a field-ready portable PC housed in a weather-resistant Apache 2800 chassis powered by an x86 LattePanda Sigma.
- ▶ Created CAD-designed 3D-printed internal mount panels, integrated active cooling, battery expansion hats, and flush I/O breakouts.
